

Instructions

1. Open box and remove bag of casing material
2. If top of compost material is brown, close the box and leave for a few days or until compost is white and knitted together.
3. Open bag of casing material and add approx 500ml water. Toss together. Take a handful and squeeze. If a little water comes out, it's ready to go. If not, add a little more water.
4. Place casing material on top of your mushroom compost.
5. Store in a cool place out of the wind and light. Mushrooms love cool humid conditions.
6. Tape back lid of box to ensure your mushrooms can breathe
7. Ensure your compost stays moist – Continue to mist with a spray bottle each day to ensure it doesn't dry out.
8. It can take 2-3 weeks before your mushrooms appear
